## Request

Detailed risk algorithm calculations and annual scores for Tom Mix to Casa Grande on L2000 for the past 10 years (DR19 is a 24 ft segment that contains the rupture origin, but I'd like to see the entirety of the Tom Mix to Casa Grande segment) – please provide in excel format by year if at all possible.

## Response

Attached are three spreadsheets to provide the risk algorithm calculations related to the Line 2000 Segment from Tom Mix to casa Grande over the last 10 years from 2012 through 2022. The first two are detailed risk results for Tom Mix to Casa Grande on line 2000 for 8/15/2021 and 1/10/2022 titled:

- DR-84_Att01_Detailed Risk Results Download Line 2000 Tom Mix to Casa Grande 8-15-2021_CONF_0008742.xlsx
- DR-84_Att02_Detailed Risk Results Download Line 2000 Tom Mix to Casa Grande 1-10-2022_CONF_0008743.xlsx

These results will be based on the Risk Algorithm Document provided in DR-18. The spreadsheets are organized as follows:

| Columns | Information |
|---|---|
| A - AE | Location information for each dynamic segment |
| AF | Length of each dynamic segment in feet |
| AG - AY | Basic pipeline attributes |
| AZ-BI | Class location, HCAs, MCAs, 624 and 710 segments and special permits |
| BJ - BX | Summary risk data |
| BY - MF | Detailed probability data and scores |
| MG - MX | Detailed consequence data and scores |

The third spreadsheet is the risk results for the years 2012 through 2021. The risk results are in the Continuous Assessment Plan (CAP) for the HCAs and 192.710 Segments (starting in 2020) in the Tom Mix to Casa Grande segment. The CAP includes the published risk summary, threats, and assessments for each HCA and 710 segment. This is included in DR-84_Att03_Continual Assessment Plans for Casa Grande to Tom Mix on Line 2000 2012-2021_0008744.xlsx.

The first two spreadsheets have detailed risk results for each foot of pipe in the segment. The last spreadsheet has the risk results that Kinder Morgan maintains for the HCAs and 710 segments only.
