Mr Swick,

Sorry that it has taken so long to respond to your email. The airplane was kept in hangar 105 at the Grants Pass airport (3S8). It was current on it's annual - last done Nov 2015. Oil changes were done by the owners every 25 hours. Other routine maintenance was handled by Steve's Aircraft out of Beagle Sky Ranch (OR96) in White City, OR. The plane was only routinely used the first weekend of every month by John Belnap for a flight from 3S8 to CVH or SNS. If the weather didn't permit him to make this flight, he would drive, which was often the case during the winter months. Other than that, it was only used for unscheduled pleasure flights. The plane was flown about 120-150 hours per year.

John Belnap was not working on any current training. Both he and I had discussed doing our IFR training, but neither one of us had begun that training yet.

I don't really have any additional information at this time. If you have any further questions, please let me know.

Sincerely,

Jonathan Jenson
