

To Mike Folker

I checked M-94110 main fuel tanks, Both tanks were empty, checked all fuel lines to fuel filter, lines were not restricted, removed fuel filter, found a small amount of sandy dust in filter, removed boost pump, hooked to a battery and boost pump, worked well. checked all lines to fuel flow divider on top of Eng, all lines were not restricted, removed flow divider and open it up to check diagram, found small amount of sandy dust in flow divider. overall it looks fairly free of any fuel flow stoppage. If you have any questions call me.
Thanks Mike

Bob Kern
