*This is information similar to the manifest signed by the pilot*

# 727-200

The information was derived using the following formulas:

$$\% \text{ MAC} = \frac{\text{ARM} - 860.2}{1.807}$$

$$\text{moment} = \text{WEIGHT} \times \text{ARM}$$

$$\text{Basic Airplane Index} = - \left[ \frac{\text{WT. (ARM-900.0)}}{50000} \right] + 500$$

$$\text{LOAD Item Index} = - \left[ \frac{\text{WT (ARM-900)}}{50000} \right] \quad \left( \begin{array}{l} \text{IF NEGATIVE} \\ \text{SUBTRACT} \\ \text{FROM 1000} \end{array} \right)$$

I was unable to verify the formula used on the manifest with the one we publish.
