Inspections for <U>-KCKHKMO-OST>

\*\*\*\* ATTENTION CONDUCTOR \*\*\*\*

<<<<<<<< REQUIRED INSPECTIONS TO BE PERFORMED >>>>>>>>

After inspection completed, if inspection specified below is a Class 1, retain Form 15287 from carmen on lead locomotive or, if conductor performed the specified inspection, either a Class 1 or 1A, record that inspection information in TRAIN INSPECTION HISTORY section in the spaces provided (also report either inspection made by conductor, Class 1 or 1A via VTR). If inspection was not performed, contact your Dispatcher prior to departure for guidance

Location            Inspection Type            To Be Performed By

No inspections required.

\*\*\*\*\*

TRAIN INSPECTION HISTORY

Location	Inspection Type	NAME	DATE/TIME	#CARS
KANCITY, KS	Class 1 Air Brake	Foreign RR Insp: KCTL		

Class 1 air brake test and ETD test information

The original Class 1 air brake test records (BNSF Form 15287, foreign RR Air test form or handwritten inspections recorded on TRAIN INSPECTION HISTORY) must be maintained on the lead locomotive of trains en route and will serve as the official Class 1 test document, when available. Electronic records of Class 1 inspections on TRAIN INSPECTION HISTORY are only to be used as a back up to the originals and when discrepancy occurs, the original will be used as the official record. A record of intermediate inspections are not required to be maintained on locomotive.

Coal trains are considered 'Cycle Trains' and may be operated up to 3,000 miles before an additional Class 1 inspection is required. This does not exclude the requirement for intermediate inspections and tests (Class 1A). Crews will be notified when cycle train inspections are required (other than when adding cars en route).

Note: ETD test information provided only if performed by other than a member of the crew. The number of cars indicated in the TRAIN INSPECTION HISTORY are not required to correspond to the number of cars currently in your train due to setouts and pickups en route or due to the 'car count' method for multi-platform equipment used by the inspector.

\*\*\*\*\*

PREVIOUS AIR BRAKE PROBLEMS ENCOUNTERED AND/OR CARS WITH AIR CUT OUT  
 Should additional air brake defects be discovered  
 en route, note the defects on blank spaces  
 provided and leave this document for relieving crew.

Question: Is it permissible to use another person's logon ID or password to access the BNSF Mainframe or other BNSF computing system?

Answer: No. The answer is located in the BNSF Railway Company Information Security Policy, which states in part:

...3 User Access to Computing Resources

To ensure accountability, users are required to have a unique user ID ...By accepting a Logon ID to any BNSF system, the owner of that ID acknowledges personal responsibility and accountability for all activity under that ID. The ID owner is also responsible for protecting the confidentiality, integrity and availability of the data/information and systems to which they access. A user must never attempt to gain unauthorized access to computing resources...

...3.2 Sharing Passwords

BNSF requires systems users protect their passwords and under no circumstances should they be shared. Passwords are considered Confidential Information, and users should safeguard them. Users should not post, display or provide access information, including but not limited to, passwords. Users are responsible for all passwords, accounts and Personal Identification Numbers (PIN) and should not share these with anyone. If a password is revealed or discovered, it must be changed immediately...

Important Items to Remember: Contact the BNSF Service Desk at 8-593-HELP (817-593-4357 for assistance with your password or refer to System General Notice No. 20.
