Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Nose wheel, gone, left main gone, dent in both left and right wings, dent in the left elevator, and propeller bent.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

The mission was to strengthen a under 15 hour student in landings and go arounds. Prior to noon, we took off out of Deer Valley, remained in the pattern for one touch and go. Then departed West, through Luke's AF monitored SATR, practiced maneuvers then arrived at Wickenburg airport. At E25 we completed two touch and gos and a full stop. In the pattern I worked with my student on key English words to strengthen our communication with operating the throttle on final. Aircraft was then shut down, my student stretched then we headed back to Deer Valley airport. At KDVT, we completed two touch and gos, a go around, and another touch and go all on runway 7L. The first go around was not executed properly, flaps were pulled in to 10 degrees rather the prescribed 25 degrees. I stressed the importance of flaps settings on a go around during the upwind leg, I showed him we were sinking and not climbing with full power, the student seemed to fully understand. On the fifth circuit, downwind to base looked solid, base to final looked good, short final; fine. Now during the downwind, tower reported a crosswind gusting up to 18 knots from the south. As we crossed over the threshold the nose veered left of centerline. I called for a go around, I saw my student apply full power and reach for the flap lever. When the aircraft neither corrected course nor started to climb I took controls. Immediately I sensed there was no lifting action when I pulled slightly on the yoke. Our aircraft was barreling towards other aircraft in the Northwest run up area, I turned our aircraft towards the runway, coordinated turn. The aircraft struck ground. Now the aircraft was flying low and slow forwards a runway sign. I pulled up to avoid the sign. We struck the sign, but now we were nose high. The aircraft stalled out, crashed and whipping near fully around to rest right of the runway. The lack of lift I contribute to one thing, improper flap settings. I strongly believe recovery was possible were our flaps set to 25 degree in the go around.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

I believe I can in the future guide/block the flap lever on the go around. Also, because students aren't allowed perform touch and gos without an instructor I should be the one to pull flaps to zero.
