Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Airplane flipped and landed upside down, totaled.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

Listened to the AWOS in flight, wind was 10 degrees at 11 knots. Reviewed my crosswind calculator and it was a 7 knot headwind and 9 knot crosswind. Overflew SEP at 3200 feet going west in order to do a right teardrop and enter the traffic pattern for a left downwind for runway 32 at midfield for a 45 degree entry. Completed downwind, turned left base then final. I was at 30 degrees of flaps airspeed was around 70 knots, crabbed into the wind and set up for the centerline. Once over the runway, power off and entered into the flare. The plane dropped and bounced really hard, put in full throttle for a go around but the wind caught me and the next thing I knew I was facing the taxiway then upside down.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

SEP airport has a tree line on the right side of runway 32. When talking with the airport manager after the accident, he stated that the tree line on the first 1/3 of the runway causes turbulence and eddies and that pilots who fly into SEP on a regular basis know that when its a little windier to land after the first 1/3 of the runway.
