Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Both MR blades and TR blades severely damaged/destroyed. TR gear box and portion of tailboom severed from aircraft. Skid cross members bent with torn skid bracing. Horizontal stabilizer and synchronizer and associated control cables damaged/destroyed.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

Following 1.1 hours of pattern training along with multiple take-offs and landings on the KDTO helipad and final air taxi to T/W J (location of destination hangar) the aircraft was hover taxied to front of hangar/apron. On pickup to a hover to reposition on apron, rpm decayed and the aircraft became unstable. Immediately thereafter a gust of wind from behind caused the aircraft to pitch down. Aircraft drifted forward, despite best efforts to stop the aircraft. Upon contact with the sod on the side of the taxiway the main rotor contacted tail rotor driveshaft and severed the tailboom forward of the tail rotor gear box.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

No apparant conclusions. Unexpected wind gust from behind could not have been anticipated.
