Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Significant damage to aircraft nose, Left wing root, leading edge of right wing and cracked canopy.

No damage to other property.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

Sunday October 27, 2019 Bergseth Field WN-76

Flight towed out at 16:35, clear conditions and nominal wind. After ridge soaring for approximately 30 minutes, we entered downwind at pattern altitude. Upon turning final the aircraft was high and a standard slip maneuver was performed to reduce altitude to appropriate glide slope. Right wing contacted the top of a tree at the runway threshold causing the aircraft to land short of the runway severely damaging the glider. Neither pilot was injured and both were able to exit the aircraft without assistance.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

By turning downwind farther north of the airfield and extending the downwind leg farther to the Northwest additional elevation would have been lost and the final approach could have been stabilized earlier without the use of the slip which might have reduced the southerly drift that put the aircraft closer to the trees on the southern margin of the airfield. By definition that we contacted a tree top, the aircraft was too low and right of the ideal glide path. The fact that the tree was not seen prior to contact would indicate that visual focus was down field toward the intended touch down point. Scanning a broader view of the flight path may have alerted the pilots to the fact that the course needed to be corrected and additional elevation was required.

Additional flight training in powered aircraft would provide landing pattern practice which is at a premium in a glider.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)

Was there Mechanical Malfunction/Failure? Yes No
(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
