BE76 Loss of Control accident 16 Jan 2020

CFR 14 Part 61 AMEL flight training

Flight lesson duration 2.2hrs

This lesson included: preflight, ground operations, taxi, take-off, checklist operations, after inadvertent pilot door opening in flight return for landing, basic maneuvers, slow flight, power off stalls, power on stalls, accelerated stalls, steep turns, vmc demo, emergency descent, single engine operations, vor radial track, traffic pattern operations, and single engine landing.

The single engine, zero thrust landing accident was caused by a mis-interpretation of the method to slow the sinking to the runway. The student heard 'abort the landing' when the communication was 'add a small amount of power to the 'right' operating engine'. The result of the application of full power to the right engine, was the airplane turned left, the nose pitched up, and a roll to the left was initiated. The left wing tip descended into the turf, which caused the airplane to rotate left, approximately 225deg where it halted in an upright position.

There were no injuries. Aircraft systems were shut down by checklist. No fluids were observed draining from the aircraft.
