

REAR SPAR - WING CENTER TANK

CW-1012

C-2144

GREEN

This is a 8" tall piece of web that extends from RBL 75 to RBL 91 at the upper spar chord and the entire stiffener at RBL 85.

The fasteners that are in the lower portion of the stiffener including those that are common to CW-1003 show a combined fastener shear and tension failure. All of the systems brackets and a portion of the systems on these brackets still remain attached. The stiffener shows a slight bow in the aft direction at the mid-height of the stiffener.

There is some soot deposits on the fwd and aft side of this segment. See the fire and explosion group notes for complete description.
