

BODY BUTTLINE 0.00 RIB - WING CENTER TANK

CW-1101
C-2402
GREEN

This is a segment of the bbl 0 rib from the mid-spar extending aft, 20 inches, 3 stiffener bays. (about half way to swb#1) It extends vertically from the upper rib chord down 36 inches. (about 2/3 the total height)

The part has a general "s" shape along the forward vertical edge where the rib post fractured in the heel line of the extrusion. The bow in the upper end is centered about 11 inches from the top and bows to the right. The aft edge is fractured in a "stair step" manner. This fracture crosses through stiffeners horizontally and runs through the middle of web bays vertically. The bottom has many fracture lines and the pieces are bent up and to the left.

The part is sooted. See Fire and Explosion Group notes for detailed documentation.
