

UPPER SKIN PANEL - WING CENTER TANK

CW-124  
Z-2675  
GREEN

This is a portion of stringer S-16 that is burnt and bent on one end. The fasteners that remain in the stringer have failed in shear except in those areas that are noted on the sketch that have failed in tension. See the sketch for definition of the remaining stringer.

The fire and explosion group notes contain complete documentation of the fire damage and soot accumulation.
