

LOWER SKIN PANEL - WING CENTER TANK

CW-241
C2138
GREEN

⚠ This portion of the lower skin panel measures 93.5" (inbd/outbd) x (8" fwd/aft at inbd end, 2" fwd/aft at outbd end).

A segment of the lower rear spar chord (ref. C-1010) remains attached along with a portion of the rear spar web.

A segment of fairing attachment stiffener angle remains attached at about right body buttock line 57.0.

A fairing support clevis fitting remains attached at about body buttock line 15.0.

The lower surface of the lower skin panel segment is moderately sooted except at the surface which interfaced with the keel beam box upper chord upper surface, at which there is no sooting.

The upper surface of the panel segment is moderately sooted at the inboard end but appears unsooted at the outboard end.
