

CW-513 FRONT SPAR
A-500
RED

This is a small section of the front spar web which was attached to CW-512 stiffener at RBL 57.50. It is adjacent to CW-501.

The web is about 12" wide X 27" high and is bent forward about 45 degrees. The web separated from the stiffener and the rivet holes did not exhibit elongation. The rivets in the stiffener show shear failures. There is a slight imprint of the rivet head on all the rivet holes.

See Fire & Explosion Notes For Documentation R 10-30-96 JAM
~~There is no evidence of any fire damage to this piece.~~
