

WING CENTER SECTION - SPANWISE BEAM # 2

CW-709  
C-2265  
GREEN

This section is the web, portions of the lower chord, and stiffeners that is approx 13" high and extends from LBL 48 to LBL 89. It also includes a portion of the LBL 57.5 lower intercostal fwd and aft of the spanwise beam.

The vertical flange of the lower chord remains attached to the web over this sections entire length. There are two skin to lower chord fasteners that remain in the lower chord that still have the csk head intact where the skin panel fracture thru the fastener line and the remaining fasteners have failed in tension. A portion of one fastener remains in each of the two lower shear ties at LBL 57.5 and LBL 75.9.

See the fire and explosion group notes for complete documentation on soot deposits.
