Subject: SJ Update

Update on South Jersey tracks and bridges post hurricane Sandy. All tracks have been inspected and reported clear. The Pennsgrove was inspected today at 3:00 p.m. during high tide. The water had risen up to the ties but not above the rail on the Main near Thorofare siding. The Thorofare siding is back in service now. We repaired the two washouts. We also repaired washout at MP 22.8 on the main. I left the speed restriction on until tomorrow so we can inspect it in the morning to make sure the water is under control. I will have the inspector check it out first thing in the morning and at 3 in the afternoon to access the situation.

Update on Movable Bridges.

- Darby bridge is still without power and in the down and lock position.
- Delair bridge is currently working off a generator.
- Paulsboro bridge in service
- Brideport bridge restored power and back in service.

We will be going back to business as usual tomorrow. The MTG will begin working on Millville IT repairing Geometry car defects. MSTG will spend tomorrow working with Ann St. Gang on Frankford Junction switches. We will be moving the backhoe to Croydon Yard and they will begin working there on Friday installing ties and timbers. Orgo welders will be working behind CSX rail gang in Morrisville. Surfacing gang will be working in Frankford yd on the new switch panels. Woodbury will be working on Geometry defects.
