

Accident DATED 2-2-2012

At approx 7²⁵_{PM} I was at Flower East
Hangar, prepping Key Lime Air
for loading and take off. I heard
a plane on the ramp landing or taking off
I didn't know but was observing in case
it was for our FBO, The throttle sounds
* caught my ear (ie: loud) I then saw that
the plane was spinning to the left,
sparks, flames like it was belly down
then a explosion of flames, I ran
out as far as I felt safe in weather
saw ~~no~~ fire, Emergency response
was in effect. I returned to FBO,

Robert Russell, CRT, MA

* Addendum

Visual on plane began at the left
of Tower East Ramp - loud - center of
that area is when sparks & flames and spin
Rt of my FOV is when fine ball, then
thud explosion and more fine like mushroom cloud
when I ran out no flames could be seen
There was about 1" of slush
and heavy wind, snow rain mix, 
coming down
