I was at work (Precision Autobody) working on my tow truck when I heard a loud bang. When I looked up I saw an airplane falling and a parachute opening as everything fell. Shortly after I saw that a helicopter was also falling and heard the next loud crash as it hit the ground. The plane glided softly into a tree as I was jumping into my truck. My partner and I chased the parachute as far as possible on the road, then jumped out and ran through a beanfield and into the tree line where the plane was sitting nose down. We heard everyone shouting that fuel was leaking

and most of the people on scene ran away. Jason pulled the man from the plane and handed him down to the three ~~of~~ of us other helpers. After this man was safely removed I ran toward where the helicopter was. After jumping the fences in the path I saw an ambulance and officer and notified them that the man in the plane was fine and to look for the helicopter. After running for what seemed like forever we found the helicopter crashed and it looked as if one victim was cut in half, and blood was everywhere. At this point I stood back and waited for the police to take a statement.

I was out back of my shop
At 1317 buchiemer Road working
on my tow truck. I took a break
and was looking out towards
The Fairgrounds when I noticed
a green helicopter and a small
white plane headed towards each other
I didn't think much at first
~~over~~ because they are always flying
over work but they kept on
path and collided. The white
plane nose pitched downward and
a parachute came out, the
small helicopter buckled and
free floated to the ground.
My coworker and I immediatly
jumped in the tow truck and
drove off to Monocacy Blvd
[REDACTED] the tow truck and
[REDACTED] across the

~~Field~~ Field toward the plane with
the chute out. Multiple others
started to run and drive over
the plane as well. Once
we reached the airplane the pilot
and ^(front) passenger were still in the
craft. The pilot was assisted
out. myself and three other
gentlemen went to the passenger side
of the craft to help the elderly
gentleman out. I got the front
passenger out on to my shoulder and
helped him down to the other
guys there to get him on the ground
the trees were cracking and the
plane was pitching to fall over
so everyone cleared safely with
fuel spilling. once everyone was
out safe myself and my coworker
ran out looking for the helicopter.
