Description of Damage to Aircraft and Other Property (Use additional sheet if necessary)

Prop strike, trailing edges of wing flaps, nose wheel door, exhaust pipes. Minor scraping of underbelly. Wings never touched the ground. No damage noted to the runway. After the aircraft was removed from the runway and the small amount of FOD collected, the Operations Supervisor Williams returned the runway service to the tower.

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

My flight 11/26/23 was a repositioning flight from PDK Atlanta, GA, to Valdosta, GA to pick up two Angel Flight passengers to transport them to Daniel Field in Augusta, GA. This would have been my 279th mission over the last 29 years. I departed PDK on an IFR flight plan at approximately 7:30 am local EST. The flight for the most part was conducted in IMC with a few glimpses of the ground along the way. The enroute portion of the flight was without issues, just rain and clouds. As I approached Valdosta while being handled by Jacksonville Center, I requested and received vectors to final for the ILS 35 approach into Valdosta Regional Airport. I was vectored into a downwind route, then base, then final at 2,200 ft. Finally given instructions to maintain 2000 ft until I reached the final approach fix KAGGE on the localizer and I was cleared for the ILS 35 approach. Everything was pretty much routine. I continued to be IMC as I picked up the glide slope after I centered on the localizer. As the glide slope indicator started to descend to KAGGE I was then turned over by Jax Center to Valdosta tower. As I descended on the glide slope I reached for the landing gear lever a little more than two dots above capture. I quickly checked the aircraft's speed. I was a little fast so, without deploying the landing gear, I reached for the wing flap lever and deployed the final increment of flaps to slow the airplane to the final approach speed. I should have, but did not return to the landing gear lever to deploy the landing gear. Tower instructed me to report KAGGE, which I did. Once the glide slope was captured at KAGEE, I followed it down as I made my altitude callouts when finally breaking out at 600 ft msl. As I now had a visual on runway 36 I informed the tower that the cloud bottoms were 600 ft msl. Tower acknowledged and thanked me as I continued the visual portion of the approach. I then crossed the numbers, flattened out my decent and started my flare. "This was going to be a good landing", I thought to myself. As I started to settle while in the flare, the aircraft was about 3 feet off the ground but continued to settle. I was waiting for the "chirp", which obviously never came. It was at that point that I realized that I hadn't deployed the landing gear and never looked for "three green". It was too late to apply power for a "go around". I then heard the most awful sound I've heard while piloting an aircraft. The aircraft came to rest in the center of the runway after taking a very slight left turn off center line. After I uttered a few choice words to myself as to how stupid I was. I immediately informed tower that I had a wheels up landing. I received a response a few seconds later, but not immediately. I then remembered to shut everything off. I looked around outside the aircraft. There was no smoke..no fire..no smell of gas. Just the curled tips of the propeller. I then turned on the master switch to ask tower if someone was coming. Tower said that a truck was on its way. Eventually the Supervisor of Operations, Dan Williams, came to take me to the FBO. He told me that a mechanic, Walt Bazemore had been contacted to get the airplane off the runway and that he would charge me \$6,000 for that service. I was outraged to say the least. I called Mr. Bazemore to verify his charges. He verified. I told him I would call back. I then asked Mr. Williams what was the alternative. He suggested and called the Fire Department. Eight firemen showed up in three fire trucks. They devised a plan to get the airplane off the ground high enough for me to electrically drop the landing gear from inside the airplane. After a few tries and a couple of deviations from the original plan, it worked! The aircraft was then towed to the tie down area of the FBO.

RECOMMENDATION (How	could this	accident/incident ha	ve been pre	vented?)			
Operator/Owner Safety Recomm	endation						
I should have done, but did no	t do a GUN	IP check.
