Went out with Iggy for flight to KMTT. I'm a private pilot without a complex endorsement. Did a touch and go at KMTT and then flew to Whiteman Bay. Upon landing at KTMB, we followed the checklist and extended landing gear. Green light turned on, but after touchdown the plane started to veer to the left. The plane went into the grass, and we shut down and got out.

Nobody was hurt, and all procedures were followed. In my opinion it was a technical failure with the landing gear.
