Offshore Waters Forecast

NWS Ocean Prediction Center Washington DC

927 PM EST Thu Nov 19 2020

New England continental shelf and slope waters from 25 nm offshore to the Hague Line, except to 1000 fm south of New England.

Seas given as significant wave height, which is the average height of the highest 1/3 of the waves. Individual waves may be more than twice the significant wave height.

ANZ898-201430-

927 PM EST Thu Nov 19 2020

.SYNOPSIS FOR NEW ENGLAND WATERS...High pressure centered SE of the waters will move E tonight. A cold front will slowly approach the region from the NW Fri, then move SE across the waters Fri night into Sat. High pressure will build near the northern areas later Sat and Sat night, and then shift E of the area Sun and Sun night as another warm front gradually moves NE across the waters. A strong cold front will approach the New England coast Sun night and Mon, then pass SE across the waters later Mon and Mon night. Low pressure will develop along the front and move NE over the waters Mon and Mon night. High pressure will again build E toward the coast Mon night through Tue night.

Offshore Waters Forecast
NWS Ocean Prediction Center Washington DC
337 PM EST Sat Nov 21 2020

New England continental shelf and slope waters from 25 nm
offshore to the Hague Line, except to 1000 fm south of New
England.

Seas given as significant wave height, which is the average
height of the highest 1/3 of the waves. Individual waves may be
more than twice the significant wave height.

ANZ898-220815-
337 PM EST Sat Nov 21 2020

.SYNOPSIS FOR NEW ENGLAND WATERS...A cold front over the area
this evening will pass S of the waters early tonight. High
pressure will build N of the area tonight into Sun, and then
shift NE of the region later Sun into Mon as a warm front
gradually moves NE across the waters. A strong cold front will
approach the New England coast Sun night, then pass E across the
waters early Mon into Mon night. Low pressure will develop along
the front and track NE near the coast Mon and Mon night. Another
high pressure will build E towards the coast Mon night through
Tue, pass N of the area Tue night, then shift E of the region Wed
and Wed night while maintaining a ridge across the SE portion. A
third cold front will move over the waters from the NW Thu, then
stall over the region Thu night as low pressure moves offshore.

947 AM EST Mon Nov 23 2020

New England continental shelf and slope waters from 25 nm offshore to the Hague Line, except to 1000 fm south of New England.

Seas given as significant wave height, which is the average height of the highest 1/3 of the waves. Individual waves may be more than twice the significant wave height.

ANZ898-240245-

947 AM EST Mon Nov 23 2020

.SYNOPSIS FOR NEW ENGLAND WATERS...A strengthening warm front will lift NE across the waters today. Developing low pressure will track NE and pass N of the region today into tonight while pulling a strong cold front E across the waters. High pressure will build E towards the coast tonight and Tue, pass just N of the area Tue night, then shift E of the region Wed. A stationary front will extend E along the New England coast Wed night into Thu night. Another low pressure will move offshore Thu night while pulling a cold front over the waters, then move slowly NE across the area Fri and Fri night as the cold front gradually passes E over the region.

Offshore Waters Forecast

NWS Ocean Prediction Center Washington DC

332 PM EST Mon Nov 23 2020

New England continental shelf and slope waters from 25 nm
offshore to the Hague Line, except to 1000 fm south of New
England.

Seas given as significant wave height, which is the average
height of the highest 1/3 of the waves. Individual waves may be
more than twice the significant wave height.

ANZ898-240800-

332 PM EST Mon Nov 23 2020

.SYNOPSIS FOR NEW ENGLAND WATERS...A strong warm front over the
far NE waters will lift NE of the area early tonight. Developing
low pressure will track NE and pass N of the region tonight while

pulling a strong cold front E across the waters. High pressure will build E towards the coast tonight and Tue, pass just N of the area Tue night, then shift E of the region Wed. A weak cold front will move slowly off the New England coast Wed night, then stall over the Gulf of Maine while weakening Thu. Another low pressure will move offshore Thu night while pulling a cold front over the waters, then move slowly NE across the area Fri and Fri night as the cold front gradually passes E over the region. Yet another cold front will move across the area Sat into Sat night, before a high pressure ridge extends E across the waters Sat night.
