**Description of Damage to Aircraft and Other Property** *(Use additional sheet if necessary)*

Main Rotor, Tail/Rudder, Propeller damaged beyond repair. Frame/Keel bent but repairable. Scuff damage to paint.

**NARRATIVE HISTORY OF FLIGHT** *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

As a student pilot my solo limitations are currently 10mph wind and 5mph crosswind, we had a calm day and I arrived to do pattern practice. Spoke to Airport Manager and pre-flighted my gyro. There was some light wind straight up Runway 18, conditions were still clear and favorable and I taxied out to Runway 18 at approximately 1100hrs.

After Pre-rotation I took off and did pattern circuits for stop and go landing practice. The first 3 circuits were comfortable and uneventful, the 4th take-off was smooth and I came around for the 4th landing. Conditions were still good, I approached and touched down without incident. The Instructors voice of "Wheels touch, throttle off, hold the nose up" clear in my head. I was at the point of the front wheel coming down when the entire gyro began to tip to the left and I had no further control of the machine.

The main rotor and tail struck the runway on the left, the energy of the rotor pushed the gyro onto it's right side and it layed over onto the right side and stopped. I unbuckled the harness and exited the gyro.

I then stood the gyro back up onto it's wheels and pushed it off of the runway without further incident.  
I had a small scrape on my Right elbow but required no treatment.

**RECOMMENDATION (How could this accident/incident have been prevented?)**

Operator/Owner Safety Recommendation

After reviewing my performance and speaking with my instructor I can only point the blame at myself. There was no mechanical issue noted or observed prior to the accident. The wind was still calm and it is doubtful it was a factor. I was on the ground and nearly zero forward ground speed and was intending to add power back in and take off for one more circuit. Our best assessment was I had the stick pulled to the side and not straight back, giving the rotor a sideways lift that pulled me over.
