Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Nose gear sheared off. prop bent. Front underside of engine cowling damaged. Right strut slightly bent. skin of underside of right wing rippled. top front corner of tail damaged.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

Approached Moose Creek (1U1) from the south following Selway River. Approached airfield at TPA 1000' AGL east side of field. Turned left-crosswind followed by left-downwind in pattern. While estimating safe distance from nearby mountainous terrain and tree-tops turned a relatively short base leg followed by short final leg onto runway 4. Set flaps to 35 degrees. Power off, carb heat on. Rapid roundout at touchdown precipitated a bounce followed by two or more bounces (possible porpoising) the last of which caused shearing off of the nose gear, prop striking the ground, and the plane nosing over onto its top. Master switch was shut off. Pilot exited plane through pilot-side door. Departure time approx 11:00 am (PUW) after refueling both wing tanks (left reserve tank half full) intended destination was Moose Creek. Except for nose gear the aircraft remained intact. There was no fuel leakage and no fire. No oil leakage.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

One of the two pilots in the flight group of three planes had been to 1U1 before and entering the landing pattern behind him or both others may have provided a better approach path & altitude and may have used runway 1 (which, at the time, seemed like a more difficult approach to the PIC). Runway 1 is longer.
