Engine separated from firewall. Nose/forward fuselage largely destroyed. Both wings with substantial damage - tips damaged from ground contact, both landng gear collapsed. Rear fuselage substantial damager from ground impact. Tail section minor damage. Tailwheel broaken.									
No damage to property - landing just off end of RWY 02 on airport property.

RECOMMENDATION (How	could this	accident/incident ha	ve been prev	vented?)				
Operator/Owner Safety Recomm	endation							
The only explanation for the accident I can hypothesize for how the airacraft behaved is the frost had re-built onto the wings, significanly decreasing lift. While I have dealt with removal of frost on same type of aircraft before while backcountry flying, usually I had waited until the sun had fully crested surrowning mountains to before departure, likely prevent in re-currance of frost. In this case, I dearted before the sun had crested the ridge to the East. It would have been better to wait until sun had fully crested the mountina to the East and provide some warmth on the wing/tail or simply waited to depart until later in the day.								
It would have been better to no is a STOL design/capble, ever the sage brush/bushes/dirt off	the shallo	w turn exacurbated
