Rachel Gunaratnam

NTSB

Explosion Investigation on June 28, 2021

Rachel,

In regards to your email I am supplying you with a copy of our SOG for gas emergencies and the following responses to your questions.

None of our firefighters have Hazwoper certifications.

The last formal gas emergencies was 12/08/2015 and was conducted at the Garland Power & Light. We normally do this every two years but obviously it's been 5 years since one was put together. We do watch youtube videos periodically on training nights but I'm unable to determine when the last one of those was done.

We currently have one main gas detector that we utilize . It is a Leakator 10 and no calibration is required for that unit.

Should you have any further questions or I can be of service please feel free to contact me.

Sincerely,

KIM R. MORRIS
Farmersville Fire Chief
