Description Narrative

At cruise altitude between AEX and the Horko intersections we hit a moderate turbulence that lasted approximately 10-15 seconds. During this time one of the FAs sustained injury. Prior to encountering the turbulence The seatbelt sign was on, a PA had been made advising everyone to be in their seats with their seatbelts fastend. I had also called the lead FA and instructed the FAs to take their seats. The aircraft received no damage and the autopilot did not disengage. After being notified of the injured FA I decided to declare an emergency and requested priority handling into KDFW. We had medical personal meet us at the gate to attend to the injured FA.
