

## CASE FINDINGS

**Jason Aguilera**  
**Air Safety Investigator**  
**Central Region**

Information collected by the NTSB Duty Officer indicated that the airplane experienced a loss of directional control during landing. The pilot was reported to have no injuries and the passenger was assessed with broken ribs and a head injury.

Inspectors from the Federal Aviation Administration responded and examined the airplane. Substantial damage was noted to the right wing. No mechanical issues were noted during the examination of the airplane.
