

05 DEC 22

BM2 [REDACTED] [REDACTED] Captain Alex Statement

- We got woken up by the sound of a sinking vessel
- We went to the armory to get our guns and go through the GAR
- We got underway on the 45638.
- When we got just past the tip of the jetties + we had an engine casualty where the STB engine would not go over 1200 RPMs.
- The engineer fixed it by turning the engine off and on again
- We pulled up on scene to the last known position.
- We got an updated position + started going in that direction.
- The Hero arrived on scene + guided us to the fishing boat
- We sent the PG pump over by an indirect pass
- We instructed the crew on how to use the pump
- The crew could not get the pump to work.
- We sent 2 crewmembers over to assist the boat with the PG.
- The PG pump broke.
- I informed Sector + recommended the order to evacuate.
- I told the Captain Alex to drop their anchor + to prepare to evacuate
- I told my crew members to pack our gear for evacuation.
- The boat was rolling much farther than it previously had been, and the lights on board began to flicker.
- I told my crew to forget the gear + the pump and to get ready to get off and evacuate the crew immediately.
- My crew members put the Captain Alex crew members across first and they followed after.
- About 5 minutes after the crew members were safely on board all of the lights went out + we better believed the boat went under.
- We started the transit back + one of the crewmembers got seasick so we slowed our way.
- We called EMS due to health concerns for the captain who was submerged in the oil and the diesel.
- ~~The crew members refused medical care~~ we pulled up at station.
- The crew members refused medical care
- We got the statement from the crew
