- *1. Please note that the Globalstar system does not support Caller ID. "Dialed digits" are retained for outgoing calls. No Caller ID information is available for incoming calls.
- *2. "Location accuracy" is not GPS-based. It is determined by a Globalstar proprietary position determination algorithm. Position error is expected to be less than 10km (80% of the time for single satellite measurements, higher if multiple satellites are in view).
- *3. Call Direction (Mobile = Outgoing) (Land = Incoming)
