Instructions:

- A Locomotive must be inspected each calendar day it is used.
- After performing a daily inspection enter the Date, Time, and Location in the next available space on the form.
- Sign the form legibly.
- QMI/QMP: A person who performs a Locomotive Inspection/Brake Test.
- Department personnel should leave it blank.

Locomotives can be on either a 92 day or a 184 day periodic inspection schedule. Units on a 184 day inspection schedule require a daily inspection by a Qualified Mechanical Inspector (QMI) at least once every 33 days. Locomotives on 92 day inspection intervals do not require QMI inspections.

A Qualified Mechanical Inspector is a person who has received instruction and training, testing, maintenance or repair of locomotives.
