

Eric Alleyne
Air Safety Investigator
National Transportation Safety Board
Office of Aviation Safety - Eastern
Region

NTSB Case Number: ERA22LA132
Aircraft: Cessna CE-140
IA/A&P: Ricky Hawkins
Date: 2/18/2022
Subject: IA brake failure observations

The information below is an email that was sent to the FAA inspector and forwarded to the NTSB investigator about the brake failure assessment of N2509N. (see below)

"Miss Falcon

I inspected the brakes on NC2509N and found L/H brake inop (no brake) inspected and found brake fluid on belly of A/C. Inspected with a light and mirror around the brake master cylinder but could not determine where the fluid is coming from. All the floor boards needs to be removed for access. The hose looks good and no evidence of it leaking, possibly a chafed line?? I hope this helps, if I can help up in any other way please let me know.

Happy Flying
Ricky Hawkins"
