**Description of Damage to Aircraft and Other Property** *(Use additional sheet if necessary)*

Engine sudden stoppage; prop struck the ground and is bent. Engine mount and firewall are bent and distorted. Landing gear crossmember and gearbox fractured causing compression distortion to the forward cabin area. Empenage and aft fuselage exhibits significant torsional and shear stress damage from abrupt vertical compression and longitudinal forces. Left wing outer aft spar is fractured and outboard 2 feet of the wing is bent upward at a 45 degree angle. Aft spar of left wing is fractured at the wing strut attachment point. Right wing exhibits torsional twisting between the forward and aft spar. Overhead cabin structure exhibits compressive distortion which fractured the overhead skylights.

**NARRATIVE HISTORY OF FLIGHT** *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

At approximately 1600 hours local time the pilot was conducting a Part 91 personal flight originating upon, and operated in the vicinity of KFSD. The pilot conducted approximately 20 minutes of air work east and north of KFSD prior to the incident. Upon landing in the first one-third of Runway 21, the aircraft bounced, the pilot attempted a go-around and applied full power. Flaps were extended 30 degrees. The nose of the aircraft pitched up and yawed right approximately 20 degrees, and simultaneously the right wing stalled causing the right wingtip to contact Runway 21. The pilot leveled the wings and pitch attitude, and arrested the yaw on an approximately 235 degree heading. The aircraft crossed over Runway 15/33 in ground effect. The tail wheel contacted the grass along the south shoulder of Runway 15/33. At that point the pilot decided to abandon the attempted go-around and closed the throttle in a level pitch attitude. The aircraft continued into waist-high grass, which contacted the main landing gear and rapidly decelerated forward momentum. The main gear contacted the ground, which was heavily saturated soft soil. The left landing gear dug into the soft soil and collapsed, causing a left yaw and downward vertical motion. The propeller struck the ground and dug into the soft soil, resulting in the aircraft pivoting approximately 120 degrees about the nose to the left, with the tail moving right. The left wingtip struck the ground, causing the the aircraft to pivot about the wingtip another 50 degrees. The tail then struck the ground causing the tail wheel to dig into the the soft soil, which rapidly decelerated any remaining southerly momentum.

With the engine stopped the pilot called the control tower and reported the runway excursion. The pilot exited the aircraft through the main cabin door under his own power. Crash rescue services were dispatched, the pilot, though ambulatory had minor injuries and was transported to the local hospital emergency room as a precautionary measure. The pilot was discharged from the emergency room approximately 6 hours later. The aircraft was recovered by a repair station located upon KFSD with a flatbed trailer and forklift.

**RECOMMENDATION (How could this accident/incident have been prevented?)**

Operator/Owner Safety Recommendation

The accident could have been prevented by completing the landing upon 21 and not attempting a go-around. Alternatively the accident could have been prevented had the waist-high grass outside the boundaries of Runway 15/33 been mowed.
