

Operations Group Chairman Factual Report
Attachment 18 – Memo: Vacaville refueling
WPR09MA159

MEMORANDUM FOR THE RECORD

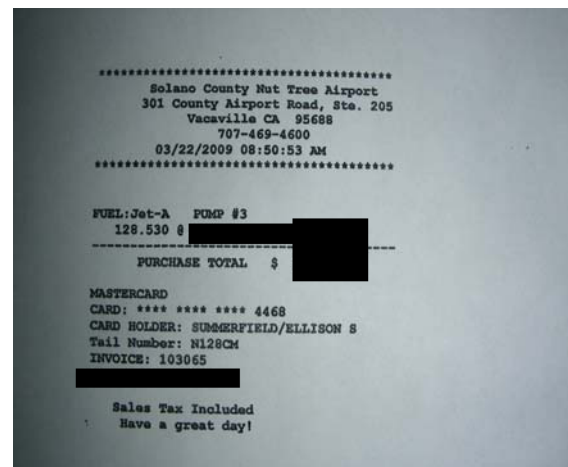

From: Thomas Little
Operations Group Chairman

Subject: WPR09MA159
Memo: pilot's fueling activity at the Vacaville Airport (VCB) on
March 22, 2009

Date: January 13, 2011

During the investigation the Vacaville Airport manager provided the Operations Group Chairman with the fueling receipt (see below) that reveals that the pilot used the airport's self-service fuel island to refuel the airplane with 128.53 gallons of Jet-A aviation fuel. The airport manager also indicated that an inspection of the fuel island area revealed that there were no empty containers of Prist in the area.

As March 22, 2009 was a Sunday and airport operations personnel do not work at the airport on Sundays, the pilot did have the option of calling an airport attendant who would have responded to the airport had the pilot wanted to purchase the fuel icing inhibitor Prist.
