Statement of flying damage to plane

On July 18, 2020 I took off from my private field in Lincolnville Me, 465 Youngstown Rd, and flew to Belfast airport, made one landing and departed to RKD, refueled my plane and returned to 465 Youngtown Rd. I made a 70 knot approach from the north. There was a 5 to 8 knot cross wind from the west. I slipped my plane over the trees at 50 knots and at that time the plane ascended fast and ran into soft turf. At that time the undercarriage could not take the pressure and collapsed and skidded to a stop at 81 ft.

Sincerely,

Willard H. Hardy
