PILOT'S MEDICAL & PATHOLOGICAL INFORMATION

Jason Aguilera
Air Safety Investigator
Central Region

The Clark County Coroner responded to the accident scene and due to the fragmented nature of the human remains, collected the remains, and determined the cause of death as blunt force trauma to the entire body for all the individuals aboard the airplane.

No specimens were provided for toxicological testing.

A review of medical information on-file with the Federal Aviation Administration revealed that the pilot's last application for medical certificate occurred on March 15, 2018. On the medical application, the pilot reported no current medical conditions and no prescribed medications. There were no concerns reported by the airman, and no significant issues identified by the Aviation Medical Examiner. The pilot was issued a First Class Medical Certificate with the limitation "must wear corrective lenses."
