

My name is Nikita Kozhemyakin. I've been PIC of the airplane N3666K when accident happened at Friday, July 22, 2022. The airplane was departed from Compton(KCPM) airport headed West towards shoreline. After I passed 91 and 110 intersection I switched on the right tank and continued my flight to Zuma beach. After I reached the Zuma reversed course and start flying 500ft SE of shore line all the way to Laguna. Between Long Beach and Los Alamitos I've got phone alarm (previously turned on) and I switched to the left tank. Right after Huntington beach pier engine quiet on me. Prop just did 3-5 spins and stopped. I did quick check around and decided to land on the water. I make sure that the airplane not gonna hit anyone and landed closer to the shore. The water gets in the airplane really quick. I was trying to get out 3 times just stuck in the belts.
