**Air Safety Investigator**  
**National Transportation Safety Board**  
**Office of Aviation Safety - Eastern Region**

---

**Date: 6/17/2021 @ 1300 EST**  
**Person Interviewed- Larry Morton – Pilot**  
**NTSB Case Number: ERA21LA256**

---

### **Narrative:**

Mr. Larry Morton was interviewed by telephone.

Mr. Morton stated there were no mechanical problems with the airplane. He stated he was departing around 0830 and as soon as he lifted off the runway, he thinks he experienced windshear or crosswind and the airplane stopped climbing. He decided to land in the grass and after touchdown he hit a hole, which fractured the left gear off, spun the airplane 180°, and the left wing contacted the ground and bent the last two-three feet of the wing up.
