Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Prop bent, engine displaced into firewall, damaged landing gear and both wings, broken wind screen. Suspect airplane destroyed, but awaiting insurance determination.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

The causes of this accident are due fuel exhaustion and my subsequent inability to reach the threshold of the runway in St. Ignatius for an emergency landing to the southeast.

I planned a short flight from KMSO to 7S0 for a couple touch and go landings and then a return to KMSO. I anticipated a flight of about an hour with a burn rate of 10-12 gallons per hour. The TSI fuel flow monitor indicated 23 gallons of fuel remaining. The flight proceeded as planned and a touch and go landing was completed on Rwy 16. Since there was a slight tailwind at ground level, I maneuvered using an extended downwind and made a left hand turn to set up for and complete a touch and go on Rwy 16. Another plane had announced plans for a full stop landing following me on 16, and a third plane announced intentions for a full stop landing using Rwy 34. I extended my downwind departure for traffic avoidance.

I was southwest of the St. Ignatius airport (52S) when the engine quit. I needed to make a decision to pick a field to land in, to pull the emergency parachute handle, or to attempt a dead stick emergency landing in St. Ignatius. I checked the remaining fuel on the TSI fuel flow monitor noted above and it revealed 15 gallons of fuel remaining. I made the decision to make a left hand turn to St. Ignatius. Factors which conspired against a successful emergency landing appear to be a 20 knot headwind from the southeast and an irrigation ditch ahead of the threshold. I was unsuccessful and would have needed a few more feet of elevation to reach the emergency runway threshold.

I believe that the fuel discrepancy was due to the following reasons, On this tank of fuel, I had a short flight of 1.5 hours on October 7. I noted flashing of the engine monitor on that flight which denoted a battery problem and presumed it was either the battery or the alternator. I landed and called Minuteman Aviation to have them tow the plane to their shop whenever possible to assess the problem. I called the next week and they had not looked at the plane, but they were able to evaluate it immediately. I heard from them the next day that the alternator needed to be replaced and I requested they do so. I was out of town that weekend and did not fly the plane until the next week on October 22. It performed well, It appears that the TSI monitor was improperly reset by pressing the right side button which restores the fuel level to full fuel (70 gallons) instead of pressing the left side button which continues to calculate fuel use from the present level. This apparently occurred at Minuteman or at my first flight following the repair. This would account for the 15 gallon discrepancy. Therefore, I would have had 8 gallons of fuel remaining for my flight to 7S0, rather than the 23 gallons shown.

I know of no other factors which would contribute to this accident.
