Offshore Waters Forecast for the Gulf of Mexico  
NWS National Hurricane Center Miami, FL  
354 PM EST Sun Nov 20 2022

Offshore Waters Forecast for the Gulf of Mexico

Seas given as significant wave height, which is the average height of the highest 1/3 of the waves. Individual waves may be more than twice the significant wave height.

GMZ001-210900-  
Synopsis for the Gulf of Mexico  
354 PM EST Sun Nov 20 2022

.SYNOPSIS...A stationary front extends from the Florida Keys to new low pressure 1013 mb near 24N88W, with a cold front extending from the low SSW across the Yucatan Peninsula. These features are combining with strong high pressure north of the area to support strong to gale force winds north and west of the front and low pressure. Very large seas to around 20 ft accompany these winds. The low will weaken to a trough while the front stalls across the southern waters through Mon, with associated gales diminishing by early Mon. Conditions will improve modestly through Mon night and then more significantly Tue through Wed. The next cold front will move across the entire basin Thu through Fri night.

Offshore Waters Forecast for the Gulf of Mexico  
NWS National Hurricane Center Miami, FL  
250 AM EST Sun Nov 20 2022

Offshore Waters Forecast for the Gulf of Mexico

Seas given as significant wave height, which is the average  
height of the highest 1/3 of the waves. Individual waves may be  
more than twice the significant wave height.

GMZ001-202000-  
Synopsis for the Gulf of Mexico  
250 AM EST Sun Nov 20 2022

.SYNOPSIS...A stationary front extends from the Straits of  
Florida near 24N81W to 1014 mb low pressure near 25N93W with a  
cold front extending from the low to the SW Gulf near 18N95.5W.  
These features are combining with high pressure north of the area  
to support strong to gale force winds north and west of the  
fronts. Very large seas to around 20 ft are with these winds. The  
low will weaken to a trough while the front stalls across the  
southern waters through Mon, with associated gales diminishing by  
early Mon. Conditions will improve modestly on Mon and then more  
significantly Tue through Wed. The next cold front may move across  
the basin Thu through the end of the week.

Offshore Waters Forecast for the Gulf of Mexico

NWS National Hurricane Center Miami, FL

910 PM EST Sat Nov 19 2022

Offshore Waters Forecast for the Gulf of Mexico

Seas given as significant wave height, which is the average height of the highest 1/3 of the waves. Individual waves may be more than twice the significant wave height.

GMZ001-201415-

Synopsis for the Gulf of Mexico

910 PM EST Sat Nov 19 2022

.SYNOPSIS...A stationary front extends from the Straits of Florida near 24N81W to 1012 mb low pressure near 26N93.5W with a cold front extending from the low to the SW Gulf near 19N96W. These features are combining with high pressure north of the area to support fresh to strong winds across much of the Gulf west of 85W. The low will weaken to a trough while the front stalls across the southern waters through Mon. The pressure gradient will strengthen the winds and produce strong to gale force winds across much of the Gulf of Mexico this evening through Sun night, with large seas to near 20 ft. Conditions will improve modestly on Mon and then more significantly Tue through Wed.

Offshore Waters Forecast for the Gulf of Mexico

NWS National Hurricane Center Miami, FL

354 PM EST Sat Nov 19 2022

Offshore Waters Forecast for the Gulf of Mexico

Seas given as significant wave height, which is the average height of the highest 1/3 of the waves. Individual waves may be more than twice the significant wave height.

GMZ001-200900-

Synopsis for the Gulf of Mexico

354 PM EST Sat Nov 19 2022

.SYNOPSIS...A 1013 mb low in the W Gulf near 25.5N96W. A sharp trough extends from the low to 19N91W. These features are combining with high pressure north of the area to support fresh to strong winds across much of the Gulf west of 86W. The low will weaken to a trough and drift S through Mon as high pressure strengthens N of the Gulf. north over the weekend. The pressure gradient will strengthen the winds and produce strong to gale force winds across much of the Gulf of Mexico this evening through Sun night, with seas to 18 ft. A cold front will develop E to W across the central Gulf tonight and shift southward, then stall across the south-central waters early Mon. Conditions will improve modestly on Mon and then more significantly Tue through Wed.

Offshore Waters Forecast for the Gulf of Mexico  
NWS National Hurricane Center Miami, FL  
1009 AM EST Sat Nov 19 2022

Offshore Waters Forecast for the Gulf of Mexico

Seas given as significant wave height, which is the average  
height of the highest 1/3 of the waves. Individual waves may be  
more than twice the significant wave height.

GMZ001-200315-  
Synopsis for the Gulf of Mexico  
1009 AM EST Sat Nov 19 2022

.SYNOPSIS...A 1012 mb low in the W Gulf near 24.5N96W is drifting  
northward. A sharp trough extends from the low to 19N91W. These  
features combined with high pressure north of the area are  
supporting fresh to strong winds across the northern and central  
Gulf west of 88W. The low and trough will drift north over the  
weekend. The pressure gradient between this low pres and new high  
pres across the south-central U.S. will strengthen the winds and

produce strong to gale force winds across much of the Gulf of Mexico late this afternoon through Sun night while a cold front develops across the northeast Gulf and drops southward. The front will stall across the south-central waters by Sun night. Conditions will improve modestly on Mon and then significantly Tue through Wed.

Offshore Waters Forecast for the Gulf of Mexico  
NWS National Hurricane Center Miami, FL  
906 PM EST Fri Nov 18 2022

Offshore Waters Forecast for the Gulf of Mexico

Seas given as significant wave height, which is the average height of the highest 1/3 of the waves. Individual waves may be more than twice the significant wave height.

GMZ001-191415-  
Synopsis for the Gulf of Mexico  
906 PM EST Fri Nov 18 2022

.SYNOPSIS...A 1015 mb low is in the SW Gulf near 21.5N96W. A sharp trough extends from 26N97W through the low to 19N91W. High pres to the north of the area is supporting fresh to strong winds across the majority of the basin. The low and trough will drift N over the weekend. The pressure gradient between this low pres and new high pres across the south-central U.S. will strengthen the winds and produce strong to gale force winds across much of the Gulf of Mexico late Sat afternoon through Sun night. Conditions will improve modestly on Mon and then significantly Tue through Wed.

Offshore Waters Forecast for the Gulf of Mexico

NWS National Hurricane Center Miami, FL

419 PM EST Fri Nov 18 2022

Offshore Waters Forecast for the Gulf of Mexico

Seas given as significant wave height, which is the average height of the highest 1/3 of the waves. Individual waves may be more than twice the significant wave height.

GMZ001-190930-

Synopsis for the Gulf of Mexico

419 PM EST Fri Nov 18 2022

.SYNOPSIS...A frontal boundary has stalled across the NW Caribbean. A sharp surface trough extends from the Yucatan Peninsula near 19.5N91W to 1017 mb low pres near 21N95W to extreme S Texas. High pressure to the north of the area is supporting strong winds to the north of the trough to 27N, and to the W of the trough to the Mexican coast. The low and trough will drift N over the weekend. The pressure gradient between this low pres and new high pres across the south-central U.S. will strengthen the winds and produce strong to gale force winds across much of the Gulf of Mexico Sat afternoon through Sun night. Conditions will improve modestly on Mon and then significantly Tue through Wed.

Offshore Waters Forecast for the Gulf of Mexico

Seas given as significant wave height, which is the average height of the highest 1/3 of the waves. Individual waves may be more than twice the significant wave height.

GMZ001-190315-

Synopsis for the Gulf of Mexico

1010 AM EST Fri Nov 18 2022

.SYNOPSIS...A stationary front extends from just south of the Yucatan Channel across the northern Yucatan Peninsula to 1015 mb low pres in the SW Gulf near 21.5N96W. The stationary front will weaken to a shearline this evening. Strong winds prevail N of the front to 26N and W of 87W, where seas remain in excess of 12 ft, while strong winds persist across the far SW Gulf from 18N to 24N. The low will drift N over the weekend. The gradient between this low pres and high pres across the south-central U.S. will produce strong to gale force winds across much of the Gulf of Mexico late Sat through Sun night. Conditions should gradually improve early next week.

Offshore Waters Forecast for the Gulf of Mexico  
NWS National Hurricane Center Miami, FL  
250 AM EST Fri Nov 18 2022

Offshore Waters Forecast for the Gulf of Mexico

Seas given as significant wave height, which is the average height of the highest 1/3 of the waves. Individual waves may be more than twice the significant wave height.

GMZ001-182000-

Synopsis for the Gulf of Mexico

250 AM EST Fri Nov 18 2022

.SYNOPSIS...A stationary front extends from just south of the Yucatan Channel to across the northern Yucatan Peninsula to 1017 mb low pres in the SW Gulf near 21N95.5W. A trough extends from the low to the Mexico Texas border and along the Texas coastal waters. The stationary front will dissipate to a sharp trough later today. Gale force winds within 120 nm of Veracruz Mexico will diminish in the next few hours, with fresh to strong winds elsewhere in the SW Gulf and from 22N to 26N. The surface trough and low will linger over the weekend. The gradient between this low pres and high pres across the south-central U.S. will produce strong to gale force winds across much of the Gulf of Mexico late Sat through Sun night. Conditions should gradually improve early next week.

Offshore Waters Forecast for the Gulf of Mexico  
NWS National Hurricane Center Miami, FL  
947 PM EST Thu Nov 17 2022

Offshore Waters Forecast for the Gulf of Mexico

Seas given as significant wave height, which is the average height of the highest 1/3 of the waves. Individual waves may be

more than twice the significant wave height.

GMZ001-181500-

Synopsis for the Gulf of Mexico

947 PM EST Thu Nov 17 2022

.SYNOPSIS...A cold front extends from near the Yucatan Channel to along the N coast of the Yucatan Peninsula to the eastern Bay of Campeche where it has stalled and reaches to a 1017 mb low pres area near 21.5N95W. The remainder of the cold front will stall across the Yucatan Channel this evening. The stationary front will become a sharp surface trough over the SW Gulf on Fri. Gale force NW winds will continue within about 120 nm of the Mexican coast near Veracruz through tonight while strong winds prevail elsewhere over the SW Gulf, and fresh to strong in the central Gulf. The surface trough will extend from the SW Gulf to the NW Gulf over the weekend while low pres lingers along it. The gradient between this possible low pres and high pres across the south-central U.S. will produce strong to gale force winds across much of the Gulf of Mexico late Sat through Sun night. Conditions should gradually improve early next week.

Offshore Waters Forecast for the Gulf of Mexico  
NWS National Hurricane Center Miami, FL  
1006 AM EST Thu Nov 17 2022

Offshore Waters Forecast for the Gulf of Mexico

Seas given as significant wave height, which is the average height of the highest 1/3 of the waves. Individual waves may be more than twice the significant wave height.

GMZ001-180315-  
Synopsis for the Gulf of Mexico  
1006 AM EST Thu Nov 17 2022

.SYNOPSIS...A cold front extends from the Upper Florida Keys to Cancun, Mexico and continues as a stationary front to the central Bay of Campeche. The cold front will move just SE of the basin by this evening while the stationary portion becomes a sharp surface trough over the SW Gulf. Gale force NW winds will prevail within about 120 nm of the Mexican coast near Veracruz through tonight while strong winds prevail elsewhere over the SW Gulf. The surface trough over the SW Gulf will continue in that location into the upcoming weekend as the next cold front moves into the NW Gulf of Mexico. This pattern is likely to bring strong to gale force winds for much of the NW and west-central Gulf over the weekend. These conditions will spread to the central and SW Gulf as the weekend progresses.

Offshore Waters Forecast for the Gulf of Mexico  
NWS National Hurricane Center Miami, FL  
428 AM EST Thu Nov 17 2022

Offshore Waters Forecast for the Gulf of Mexico

Seas given as significant wave height, which is the average height of the highest 1/3 of the waves. Individual waves may be more than twice the significant wave height.

GMZ001-172130-  
Synopsis for the Gulf of Mexico  
428 AM EST Thu Nov 17 2022

.SYNOPSIS...A cold front extends from South Florida across the SE Gulf into the central Bay of Campeche. The front will move just SE of the basin by this evening. Strong to gale force northerly winds prevail within about 120 nm of the Mexican coast to the W of the front. Strong high pressure building over Texas will tightening the pressure gradient across the Gulf through Fri. As a result, expect increasing winds and building seas across most of the basin, with gale force winds over the SW Gulf through early Fri. A trough or low pressure is forecast to develop over the western Gulf during the upcoming weekend. This pattern could bring gale conditions over most of the western Gulf, and strong to near gale force winds over the eastern and south-central Gulf late Sat through Sun night.

1005 PM EST Wed Nov 16 2022

Offshore Waters Forecast for the Gulf of Mexico

Seas given as significant wave height, which is the average height of the highest 1/3 of the waves. Individual waves may be more than twice the significant wave height.

GMZ001-171515-

Synopsis for the Gulf of Mexico

1005 PM EST Wed Nov 16 2022

.SYNOPSIS...A cold front extends from near Fort Meyers, Florida to 21N90W to the central Bay of Campeche. The front will move SE and extend across the far SE Gulf on Thu morning, and move just SE of the basin by Thu evening. Strong to gale force northerly winds prevail within 120 nm of the Mexican coast to the W of the front. Strong high pressure building over Texas will tightening the pressure gradient across the Gulf through Fri. As a result,

expect increasing winds and building seas across most of the basin, with gale force winds over the SW Gulf through early Fri. A trough is forecast to develop over the western Gulf during the upcoming weekend. This pattern could bring gale conditions over most of the western Gulf, and strong to near gale winds over the eastern and south-central Gulf Sat evening through Sun.

Offshore Waters Forecast for the Gulf of Mexico  
NWS National Hurricane Center Miami, FL  
336 PM EST Wed Nov 16 2022

Offshore Waters Forecast for the Gulf of Mexico

Seas given as significant wave height, which is the average height of the highest 1/3 of the waves. Individual waves may be more than twice the significant wave height.

GMZ001-170845-  
Synopsis for the Gulf of Mexico  
336 PM EST Wed Nov 16 2022

.SYNOPSIS...A cold front extends from near Fort Meyers, Florida to 21N95.5W to the central Bay of Campeche. The front will move SE and extend across the far SE Gulf on Thu morning, and move just

SE of the basin by Thu evening. Strong to gale force northerly winds prevail within 120 nm of the Mexican coast to the W of the front. Strong high pressure building over Texas today will tightening the pressure gradient across the Gulf through Fri. As a result, expect increasing winds and building seas across most of the basin, with gale force winds over the SW Gulf through early Fri. A trough is forecast to develop over the western Gulf during the upcoming weekend. This pattern could bring gale conditions over most of the western Gulf, and strong winds over the eastern Gulf Sat evening through Sun.

Offshore Waters Forecast for the Gulf of Mexico

NWS National Hurricane Center Miami, FL

955 AM EST Wed Nov 16 2022

## Offshore Waters Forecast for the Gulf of Mexico

Seas given as significant wave height, which is the average height of the highest 1/3 of the waves. Individual waves may be more than twice the significant wave height.

GMZ001-170300-

Synopsis for the Gulf of Mexico  
955 AM EST Wed Nov 16 2022

.SYNOPSIS...A cold front extends from near Tampa Bay, Florida to the central Bay of Campeche this morning and will move SE and extend across the SE Gulf on Thu morning, and move just SE of the basin by Thu evening or Thu night. Fresh to strong northerly winds, with frequent gusts to gale force within 120 nm of the Mexican coast follow the front. Strong high pressure will begin to build over Texas today, tightening the gradient across the Gulf region. As a result, expect increasing winds and building seas across most of the basin, with gale force winds over the SW Gulf late today through Thu night. High seas will build over the SW Gulf by late Thu. Looking ahead, a trough or low pressure is forecast to develop over the western Gulf during the upcoming weekend. This system could bring gale conditions over most of the western Gulf, and strong winds over the eastern Gulf.

Offshore Waters Forecast for the Gulf of Mexico  
NWS National Hurricane Center Miami, FL  
414 AM EST Wed Nov 16 2022

Offshore Waters Forecast for the Gulf of Mexico

Seas given as significant wave height, which is the average height of the highest 1/3 of the waves. Individual waves may be more than twice the significant wave height.

GMZ001-162115-  
Synopsis for the Gulf of Mexico  
414 AM EST Wed Nov 16 2022

.SYNOPSIS...A cold front extending from northern Florida near 30N83W to the central Bay of Campeche will reach from near Tampa Bay, Florida to the central Bay of Campeche this morning. The

front will extend across the SE Gulf on Thu morning, and move just SE of the area by Thu evening or Thu night. Fresh to strong northerly winds, with frequent gusts to gale force follow the front. Strong high pressure will begin to build over Texas today, tightening the gradient across the Gulf region. As a result, expect increasing winds and building seas across most of the basin, with gale force winds over the SW Gulf, including the Veracruz area, late today through Thu night. Very rough seas will build over the SW Gulf by late Thu. Looking ahead, a trough or low pressure is forecast to develop over the western Gulf during the upcoming weekend. This system could bring gale conditions and very rough seas over most of the western Gulf, and strong winds with moderate to rough seas over the eastern Gulf.

Offshore Waters Forecast for the Gulf of Mexico

NWS National Hurricane Center Miami, FL

1000 PM EST Tue Nov 15 2022

Offshore Waters Forecast for the Gulf of Mexico

Seas given as significant wave height, which is the average height of the highest 1/3 of the waves. Individual waves may be more than twice the significant wave height.

GMZ001-161500-

Synopsis for the Gulf of Mexico

1000 PM EST Tue Nov 15 2022

.SYNOPSIS...A cold front extending from the Florida Panhandle near 30N85W to the central Bay of Campeche will reach from Tampa Bay, Florida to the central Bay of Campeche by Wed morning. The front will reach the SE Gulf on Thu morning. Fresh to strong northerly winds follow the front with gale force winds occurring near Tampico, Mexico. The gales will migrate southward to near Veracruz, Mexico tonight. By Wed, strong high pressure will build over Texas, tightening the gradient across the Gulf region. As a result, expect increasing winds and building seas across the basin, with gale force winds over the SW Gulf, including the

Veracruz area, late Wed through Thu night. Very rough seas will build over the SW Gulf by late Thu. Strong winds will persist in the SW Gulf through Fri before the next cold front enters the basin on Sat. Gales are possible in the western Gulf with this front.
