Iron Maiden Report

On 4-15-2020 work was conducted during the day shift starting at 7:00am to 12:00 noon and from 1:00 pm to 5:00pm.

- 1. Antonio Flores and Neftali Blanco were washing the remaining coaming off of the 2nd deck starboard side cabin at the blower trunk. The work was started at 7:00 am and completed at 9:00 am. Those employees were then moved to the aft bulwarks to continue repairs there for the remainder of the day.**
- 2. Larry Hebert and Silverio Castillo completed welding and dye testing the insert in the galley over the #2 ballast tank from 7:00 am until 10:00 am. They were moved to the generator room and started removing woodwork under the watertight door to crop and renew an insert in the bulkhead from 10:00 am until 2:00 pm. While removing the woodwork they found holes in the deck which is over the sewage tank. We do not have a marine chemist certificate for that tank. We stopped until the tank cleaners could finish cleaning and a chemist certificate can be provided. Those employees were moved up to the second deck starboard side bathroom to remove woodwork for repairs. They started to crop and renew an insert in the starboard side cabin bulkhead for the remainder of the day.**
