Subject: Statement for train 3223

I was informed that train 3223 would be meeting mechanics at the hole in the fence. Once the train arrived, the train sat on number three track within Wayne while the mechanics checked out whatever issue they were having. I called the train to get a status on their movement and I was informed by the engineer that the train had three bad cars and a bad motor per mechanics, but was OK to continue south.

Thank You
