## Personal Electronic Device and Mobile Phone Records

Specialist's Factual Report  
By Bill Tuccio, Ph.D.

### 1. EVENT SUMMARY

Location: Pine Bluff, Arkansas  
Date: April 3, 2015  
Vehicle: Locomotive  
Registration: EMD Freight Locomotive GP60  
Operator: Railroad Switching Services  
NTSB Number: DCA15FR007

On April 3, 2015, at about 9:23 pm central daylight time (CDT), in Pine Bluff, AR, at the Evergreen Packaging Plant, a switch crew consisting of an operator and ground person was shoving approximately 34 box and tank cars (nine box cars were loads) using an EMD freight locomotive GP60, East from the switch lead into track four of the facility interchange yard. The switch crew was building an outbound block of cars for interchange. The switch crew was attempting to make a cut approximately 9 cars ahead of the locomotive. The operator received a radio command from the ground person to shove East three cars. The operator stopped after moving approximately three car lengths and not receiving any further commands. The operator departed the locomotive and discovered the ground person fatally injured underneath the truck of the car where the cut was being made.

### 2. GROUP

A group was not convened.

### 3. DETAILS OF INVESTIGATION

The National Transportation Safety Board (NTSB) Vehicle Recorder Division received the following personal electronic device (PED):

Device Manufacturer/Model:	Nokia Smartphone
Serial Number:	Not Determined

Additionally, in response to a subpoena, mobile phone service providers provided mobile phone records for six mobile phones, including the Nokia Smartphone.

### 3.1. Nokia Smartphone Device Description

The Nokia Smartphone is a touch-screen operated smartphone capable of voice calling, text messaging, email, photo/video recording, audio (music) playback, and numerous other specialized functions depending on configuration. The unit is capable of accessing wireless cellular networks and other wireless devices supporting Bluetooth. Specialized functions are supported by additional user-installed program applications (Apps). Application data is stored in non-volatile memory<sup>1</sup> and may include call logs, text messaging logs, image, video, and position location information. In addition, specialized application data may be stored in a proprietary file structure using numerous file formats including: binary, ASCII, HTML, SQL, etc. The amount and type of data stored varies based on the software version and configuration of the specific device.

#### 3.1.1. Nokia Smartphone Data Recovery

Upon arrival at the NTSB Vehicle Recorder Division, it was evident the device had sustained significant impact damage, as shown in figure 1. The phone contained an undamaged, 1GB microSD card. Only the 1GB microSD card contents were examined; no effort was made to repair the phone. According to the IIC, this phone was owned by the fatally injured ground person.

**Figure 1. Nokia smartphone as received.**

#### 3.1.2. Nokia Smartphone Data Description

The microSD card contained no information pertinent to the investigation.

---

<sup>1</sup> Non-volatile memory is semiconductor memory that does not require external power for data retention.

### 3.2. Mobile Phone Records

Table 1 shows the six mobile phones determined to be pertinent to the investigation. Mobile phone records were provided to the NTSB from the service providers in response to subpoena. Mobile phone records typically provide date, time, duration, direction, and source/destination information for calls, text messages, multimedia messaging, and data usage. The Nokia Smartphone discussed previously was phone ID#F.

Reference ID in Report	Owner Description
ID#A	Train Operator (first of two mobile phones)
ID#B	Train Operator (second of two mobile phones)
ID#C	Ground Person #2
ID#D	Crew Phone
ID#E	First Responding Manager
ID#F	Ground Person #1 (Fatally Injured)

### 3.3. Phone Records Timing

Mobile records were provided in Greenwich Mean Time (GMT) and CDT by the mobile phone service providers. The records were converted to CDT for this report as described in the following.

### 3.4. Phone Records Data Description

Mobile phone activities for the 72 hours prior to the accident were examined for each phone. Activity related to data usage is not necessarily indicative of user interaction with the phone, because smartphones may engage in background activities not initiated by the user. Furthermore, incoming text messages may not be indicative of user interaction with the phone, because text messages may be received but not read.

Tabular listings of phone activity are listed in appendix A.

#### 3.4.1. Phone ID#A

Table A-1 provides all calls, data, and text message activity related to phone ID#A. Data activity were provided to the NTSB by the mobile phone service provider in GMT and converted to CDT; text and phone records were provided to the NTSB by the mobile phone service provider in CDT and required no conversion.

Data activity (noted as “LTE-4G” in table A-1) were recorded by the mobile phone service provider in the following manner. Whenever a data session began, the session start time was recorded; thereafter, data usage accrued in the prior 15 minutes (approximately) was recorded. Finally, when a session ended, the stop time of the session and concluding data usage was recorded.

Routed calls were calls that went to voice mail. Most voice mail/routed calls also contained an “undetermined” direction at the same time as the voice mail; this was an artifact of the voice mail transaction.

### **3.4.2. Phone ID#B**

Table A-2 provides all calls, data, and text message activity related to phone ID#B. For a description of the records, see the prior section for phone ID#A, as the records were provided from the same mobile phone service provider in the same format.

### **3.4.3. Phone ID#C**

Table A-3 provides all data activity related to phone ID#C. Data activity were provided to the NTSB by the mobile phone service provider in GMT and converted to CDT.

Data activity was recorded by the mobile phone service provider as Port Allocation and Deallocation times; these times refer to data sessions on the mobile phone. For example, in the first row of table A-3, the cell phone connected to the provider from 21:08 to 22:19 CDT on March 30, 2015. Additionally, multiple data sessions may occur simultaneously.

Table A-4 provides all phone and text message activity related to phone ID#C. Text and phone records were provided to the NTSB by the mobile phone service provider in CDT and required no conversion.

### **3.4.4. Phone ID#D**

Table A-5 provides all phone activity related to phone ID#D. No data or text message activity occurred for this phone. For a description of the records, see the prior section for phone ID#C, as the records were provided from the same mobile phone service provider in the same format.

### **3.4.5. Phone ID#E**

Table A-6 provides data activity related to phone ID#E. Data activity were provided to the NTSB by the mobile phone service provider in GMT and converted to CDT.

Data activity was recorded by the mobile phone service provider as Connection Time and Duration; these times refer to data sessions on the mobile phone. For example, in the first row of table A-6, the cell phone connected to the provider at 20:36 CDT on March 30, 2015 and remained connected for 60 minutes. Additionally, multiple data sessions may occur simultaneously.

Table A-7 provides all phone and text message activity related to phone ID#E. Text and phone records were provided to the NTSB by the mobile phone service provider in GMT and converted to CDT.

### **3.4.6. Phone ID#F**

Table A-8 provides data activity related to phone ID#F and table A-9 provides phone and text message activity related to phone ID#F. For a description of the records, see the prior section for phone ID#E, as the records were provided from the same mobile phone service provider in the same format.

## APPENDIX A – Tabular Phone Activity Listings

**Table A-1. Phone ID#A – calls, data, and text.**
