Mobile Phone Records

Specialist's Factual Report
By Bill Tuccio, Ph.D.

1. EVENT SUMMARY

Location: Panhandle, Texas
Date: June 28, 2016, 08:21 central daylight time (CDT)
Trains: Eastbound Train
Westbound Train
Operator: BNSF Railway
NTSB Number: DCA16FR008

For a summary of the accident, refer to the *Accident Summary* report, within this docket.

2. GROUP

A group was not convened.

3. DETAILS OF INVESTIGATION

In response to a subpoena, two mobile phone service providers provided the National Transportation Safety Board (NTSB) mobile phone records for four devices, as described in this report.

3.1. Mobile Phone Records Description

Mobile phone records typically provide date, time, duration, direction, and source/destination information for calls, text messages, multimedia messaging, and data usage.¹ Table 1 shows the mobile phone records received. The association between personnel role and phone number identification was provided by the Investigator-in-Charge (IIC).

Table 1. Mobile phone record summary.

Personnel Role				Identification
Engineer, Eastbound Train				ID#A

¹ Phone records cannot determine if a text or multimedia message received was actually viewed by the recipient. Additionally, some contemporary messaging applications may use data instead of traditional "SMS" or multimedia messaging protocols; as such, mobile phone records cannot determine if this type of activity was occurring.

Personnel Role					Identification
Engineer, Westbound Train					ID#B
Conductor, Eastbound Train					ID#C
Conductor, Westbound Train					ID#D

3.2. Mobile Phone Records Timing

Mobile phone service providers report usage using different time zone schemas. One service provider supplied all records in Coordinated Universal Time (UTC), which were converted in this report to central daylight time (CDT) by subtracting 5 hours. The other service provider supplied phone and text message data (for this service provider, all related phones did not have a data service plan) based on the cell tower servicing the call; in this case, all calls were expressed in CDT. Thus, all times in this report are shown as CDT, expressed as HH:MM, where HH is a number between 00 and 23. When possible, seconds are included (:SS).

Mobile phone service records have an unknown latency from the time activity occurs and when the record is timestamped in the mobile phone records. The delay is expected to be on the order of seconds.

In addition to latency concerns, the synchronization between time used in mobile phone service records and other investigative event times were not determined for this report.

3.3. Mobile Phone Records Data Description

Mobile phone activities from June 24, 2016, until shortly after the reported time of the accident on June 28, 2016, at 08:21 were examined. Start times vary based on information supplied in source mobile phone records, and end times vary in order to show continuity surrounding the accident time.

3.3.1. Mobile History: ID#A

Table 2 shows mobile call activity. When an inbound or outbound call was routed to voicemail, the "Voicemail" column contains "VM." Table 3 shows data usage. Table 4 shows text message activity.

Table 2. Mobile call activity: ID#A.

Date, Time (CDT)	Duration (seconds)	Direction	Voicemail	Other Party

3.3.4. Mobile History: ID#D

Table 11 shows mobile call activity. When an inbound call was routed to voicemail, the "Voicemail" column contains "VM." Table 12 shows data usage. Table 13 shows text message activity.

In Table 13, there are a large number of outbound numbers "900080004101;" according to Verizon, these phone numbers were automated activity by Verizon to synchronize text messages to other devices. This "900080004101" activity may be entirely a network activity and does not imply the phone was connected to the network. Similarly, the entry on June 28, 2016, at 10:54:51 related to phone "910090009000" was an entry related to a failed delivery that had originated June 28, 2016, at 06:54.

Table 11. Mobile call activity: ID#D.
