Railroad

The NTSB investigated 15 railroad accidents in 2020.³ An additional 1,785 accidents that met the requirements of Title 49 U.S.C. 1131 were identified but not investigated; of these, 1,014 were identified as having a limited safety benefit and 771 were not investigated because of limited investigative resources. An accident with a limited safety benefit is an occurrence for which NTSB investigators were able to determine quickly that no safety recommendations were likely to be issued or reiterated. Those accidents that were not investigated because of limited NTSB resources share some similarities with those of limited safety benefits; although the causes of these accidents may not have been immediately identifiable, the low level of severity of the accidents and other factors were weighed against those of ongoing investigations to make the best use of the resources available.
