

# **Aviation Investigation Final Report**

Location: SUN VALLEY, Arizona Accident Number: LAX00LA218

Date & Time: June 6, 2000, 10:00 Local Registration: N133PW

Aircraft: Beech 95 Aircraft Damage: Substantial

**Defining Event:** 2 None

Flight Conducted Under: Part 91: General aviation - Instructional

### **Analysis**

All three landing gear retracted immediately prior to rotation and the airplane settled back to the runway. The left wingtip struck the runway and the airplane cartwheeled, running into a rising dirt embankment, and coming to rest on the side of the runway. In his written statement, the flight instructor reported that the nose gear collapsed during the takeoff ground roll. He had no further explanation of the event. According to a pilot-rated witness, the airplane was on the takeoff ground roll when all three landing gear retracted prior to rotation, and the airplane settled back to the runway. The witness went to the assistance of the airplane occupants and spoke to the flight instructor. According to the witness, the instructor said that the student might have placed the landing gear selector switch in the up position instead of the flaps after the previous landing.

### **Probable Cause and Findings**

The National Transportation Safety Board determines the probable cause(s) of this accident to be: The certified flight instructor's (pilot-in-command) inadequate supervision of his dual student, who prematurely retracted the landing gear.

#### **Findings**

Occurrence #1: GEAR RETRACTION ON GROUND Phase of Operation: TAKEOFF - ROLL/RUN

**Findings** 

- 1. (C) GEAR RETRACTION PREMATURE DUAL STUDENT
  2. (C) PROCEDURES/DIRECTIVES NOT FOLLOWED DUAL STUDENT
  3. (C) SUPERVISION INADEQUATE PILOT IN COMMAND(CFI)

#### **Factual Information**

On June 5, 2000, about 0800 hours mountain standard time, a Beech 95, N133PW, sustained substantial damage when the landing gear retracted during takeoff from Sun Valley, Arizona. Sheble Aviation, Bullhead City, Arizona, operated the airplane under the provisions of 14 CFR Part 91. The certified flight instructor and the private pilot student were not injured. Visual meteorological conditions prevailed and no flight plan had been filed for the instructional flight.

According to a pilot-rated witness, the airplane was on the takeoff ground roll when all three landing gear retracted prior to rotation, and the airplane settled back to the runway. The left wingtip struck the runway and the airplane cartwheeled, running into a rising dirt embankment, and coming to rest on the side of the runway. The witness went to the assistance of the airplane occupants and spoke to the flight instructor. According to the witness, the instructor said that the student might have placed the landing gear selector switch in the up position instead of the flaps after the previous landing.

In his written statement, the flight instructor reported that the nose gear collapsed during the takeoff ground roll. He had no further explanation of the event.

A review of the Beech Model 95 Travel Air Owner's Manual reveals an excerpt from the normal takeoff procedure and reads: "Retract the landing gear as soon as you are firmly airborne with no danger of settling back to the runway."

|                                   |  |

The National Transportation Safety Board (NTSB) is an independent federal agency charged by Congress with investigating every civil aviation accident in the United States and significant events in other modes of transportation—railroad, transit, highway, marine, pipeline, and commercial space. We determine the probable causes of the accidents and events we investigate, and issue safety recommendations aimed at preventing future occurrences. In addition, we conduct transportation safety research studies and offer information and other assistance to family members and survivors for each accident or event we investigate. We also serve as the appellate authority for enforcement actions involving aviation and mariner certificates issued by the Federal Aviation Administration (FAA) and US Coast Guard, and we adjudicate appeals of civil penalty actions taken by the FAA.

The NTSB does not assign fault or blame for an accident or incident; rather, as specified by NTSB regulation, "accident/incident investigations are fact-finding proceedings with no formal issues and no adverse parties ... and are not conducted for the purpose of determining the rights or liabilities of any person" (Title 49 Code of Federal Regulations section 831.4). Assignment of fault or legal liability is not relevant to the NTSB's statutory mission to improve transportation safety by investigating accidents and incidents and issuing safety recommendations. In addition, statutory language prohibits the admission into evidence or use of any part of an NTSB report related to an accident in a civil action for damages resulting from a matter mentioned in the report (Title 49 United States Code section 1154(b)). A factual report that may be admissible under 49 United States Code section 1154(b) is available here.
